469-994-8487 | vinaydev@utexas.edu | [linkedin.com/in/vinay-devarakonda](https://www.linkedin.com/in/vinay-devarakonda) | vinayd1.netlify.app

EDUCATION

The University of Texas at Austin

B.S. in Mathematics, B.S. in Statistics & Data Science (Double Major)

Programming & Computation Certificate (Computer Science Minor)

Expected May 2028

GPA: 3.53/4.00

Relevant Coursework: Data Structures & Algorithms, Databases, Web Programming, Discrete Mathematics, Scientific Computation, Practical ML, Probability, Linear Algebra, Math for ML, Multivariable Calc, Data Visualization

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, C++, SQL, HTML, CSS, R

Frameworks: React (Next.js, Native), Node.js, FastAPI, Express, Flask, Spring Boot, LangChain, SQLAlchemy

Cloud/Tools: AWS Lambda, DynamoDB, PostgreSQL, Cloudflare Workers, OpenSearch, MongoDB, Supabase

ML: PyTorch, TensorFlow, scikit-learn, NumPy, Pandas, CUDA, YOLO, OpenCV, SAM2, ONNX

Certifications: Stanford Machine Learning Specialization (Audited), AWS Machine Learning Foundations

EXPERIENCE

Software Engineering Intern

June 2026 – Aug. 2026

Alias Intelligence

Austin, TX

- Enabled 8K+ transactions across 40+ users by building a transaction system handling 20+ concurrency edge cases
- Reduced RM processing time by 60% by auto-adjudicating 350+ orders (70% of all orders) by integrating GPT-4o confidence scoring into a real-time AWS and Missive webhook pipeline processing 450+ vendor replies and routing orders downstream
- Created performance monitoring for 20+ managers, including CTO, by building an OpenSearch-powered analytics dashboard
- Handled 40+ daily request dispatches by engineering a queue-based claiming system with Terraform and stream handlers

Founder & Software Engineer

May 2026 – Present

Ragify

Dallas, TX

- Reached 350+ active users and 20K+ invocations, including adoption by professional Carnatic vocalist Neyveli Ramalakshmi and 75+ students at Sukadhwani Institute, by building a Google-verified B2C music SaaS with interactive practice tools
- Enabled auto-pitch detection by implementing a convolutional estimator and training a 4-class classifier on KritiSamhita
- Expanded engagement with 5+ interactive quiz modules, a 3D metronome, leaderboards, and persistent practice sessions
- Partnered with 5+ certified music teachers across New Jersey and Texas and led collaboration with 12+ senior music artists

Software Developer

Jan. 2026 – Mar. 2026

Daemo AI (VC-backed startup)

Remote

- Processed 200+ financial queries across 30+ user sessions by building a Stripe finance automation system with Daemo Engine and Express across 6 REST endpoints and 7 tools for payments, revenue analysis, and email workflows
- Reduced financial query lookup time by 60% versus manual search by deploying an automated backend to Railway
- Engineered a 4-agent trading simulation executing 1,000+ simulated trades by ingesting Alpha Vantage market data, synchronizing portfolios and trade state in MongoDB, and coordinating agent execution through Daemo APIs

Software Engineering Intern

Aug. 2025 – Jan. 2026

Longhorn Developers

Austin, TX

- Reduced stale menu records by 60% for 10,000+ active users of the UT Dining app with 160K+ impressions by implementing Supabase record validation, Cloudflare cache revalidation, and version-based client synchronization in React Native
- Cut API traffic by 35% and menu-query latency by 45% by batching Supabase queries, adding indexed lookups, and persisting menu data to support local caching with SQLite and Drizzle ORM for faster menu retrieval and reduced network dependency

Machine Learning Research Assistant

Sep. 2025 – Feb. 2026

HUMAIN Lab (Advisor: Dr. Leqi Liu)

Austin, TX

- Co-authored and published FinBench as an arXiv preprint and submitted it to the ICLR 2026 Advances in Financial AI workshop by developing a time-gated benchmark for calibrated LLM financial forecasting across 3 intraday forecast horizons
- Built a time-gating protocol for look-ahead bias, using Brier and Winkler scoring to penalize miscalibrated model confidence
- Achieved a 0.577 Brier Skill Score against a coin-flip baseline across 6 LLMs by evaluating AAPL, MSFT, and NVDA

PROJECTS

Tennis Stringing AI Platform | *Java, Spring Boot, Ollama, LangChain4j, MySQL*

Aug. 2025 – Apr. 2026

- Reduced customer-record lookup and insertion time by ~40% for a \$15K+ tennis racquet stringing business by combining SQLCoder-7B few-shot prompting with ChromaDB semantic search to translate requests into context-aware record retrieval
- Enabled natural-language querying across 500+ customer records by building an internal AI service connected to MySQL

StatOracle – CV Sports Intelligence | *C++, Python, AWS, CUDA, OpenCV, YOLO*

July 2025 – Jan. 2026

- Achieved 91% precision, 86% recall, and 40+ FPS inference on processed footage from 7+ high-school tennis matches
- Automated player and ball detection from youth tennis footage by engineering a YOLOv11n computer-vision model
- Trained on 4,000+ annotated frames using an NVIDIA T4 GPU by annotating images with SageMaker Ground Truth, storing frames in S3, exporting model to ONNX, and built a C++ and OpenCV inference pipeline for accelerated deployment
